

Fact Sheet

Overview

A master plan is a comprehensive airport study that envisions the short-, medium-, and long-term development plans. This Master Plan Update will strategically position the Ted Stevens Anchorage International Airport (ANC) for the future by forecasting future needs, developing alternatives, and creating a strategic vision that will keep the airport efficient and economical.

Usually, master plan updates occur every 5 to 7 years. It has been 10 years since the last Master Plan Update was adopted in 2002. Planning efforts in 2008 resulted in a study report, but the report was not formally adopted as a Master Plan Update.

ANC is planning for the future. This Master Plan Update will be a roadmap for future development to meet the needs of the traveling public and the airport.

Schedule

This Master Plan Update will take about 18 months to complete, from June 2012 to December 2013. We plan to capture the majority of public input within one school year (September 2012 to May 2013) to make the best use of the public's time and interest. The summer of 2012 is an initiation phase, with the kick-off of the technical study and formal public involvement scheduled for fall 2012.

Public Input

Public input will help make this Master Plan Update a success. In this Master Plan, the airport strives to continue improving its relationship with the community. For this reason, the airport is asking for early public input to help shape the public process. Please share with us any ideas you have for conducting a successful public involvement process. Throughout the Master Plan process, the team will be open to public input, and we promise to communicate to the public how input shapes the plan. The formal public process will be presented in the Public Involvement Plan, which will be completed in the summer of 2012 and will be made available to the public online.
